CMSC 207 Mini-Project: Build a Personal Web Profile

Inspired by the website in the book *Create with Code: Build Your Own Website* by Clyde Hatter

Project Overview

This mini-project is a stepping stone towards the final project and focuses on applying foundational web development concepts. Students will create a basic personal web profile, following the principles taught in Clyde Hatter's book. The project will reinforce HTML structure, CSS styling, and basic JavaScript interactivity while keeping the scope manageable for mid-semester progress.

Project Objectives

By completing this mini-project, students will:
✅ Develop a structured and semantic HTML page.
✅ Apply CSS to enhance layout, colors, and typography.
✅ Use JavaScript for simple interactivity.
✅ Implement responsive design for mobile and desktop views.
✅ Get comfortable with debugging and refining their web pages.

Project Requirements

1. Website Structure (Single Page Website)

The webpage should include the following sections:
✅ **Header** – Name, site title, and a simple navigation menu (links can be placeholders).
✅ **About Me** – A short paragraph introducing the student with an image.
✅ **Hobbies & Interests** – A list of at least three hobbies with brief descriptions.
✅ **Contact Info** – A section displaying an email address and social media links (placeholders).

2. Technologies Used

✓ **HTML** – Use proper semantic tags (`<header>`, `<section>`, `<footer>`, etc.).
✓ **CSS** – External stylesheet for design and layout.
✓ **JavaScript** – A simple script for interactivity (e.g., button click effects or changing content dynamically).
✓ **(Optional Enhancements)** – Basic CSS animations or transitions.

Features & Enhancements

⭐ **Navigation Menu** – A simple top menu with working anchor links.
⭐ **Hover Effects** – CSS styling changes when hovering over buttons or images.
⭐ **JavaScript Interaction** – A button that displays a fun fact about the student when clicked.
⭐ **Mobile-Friendly Layout** – Use CSS media queries to ensure the site looks good on different screen sizes.

Project Submission (Ensure all links are working and have no expiration before submission)

📌 **GitHub Repository Link (PDF File)** – Must include the source code and a README file.
📌 **Live Demo Link (PDF File)** – Hosted on GitHub Pages, Netlify, Vercel, or any free web server available.
📌 **Short Reflection Discussion Forum (1-2 paragraphs)** –

- What challenges did you encounter?
- What did you learn from this mini-project?

Grading Criteria

Criteria	Description	Points
Structure & Code Quality	Proper HTML & CSS structure, clean code	30%
Design & Layout	Clear, visually appealing design with good readability	25%
Interactivity	Basic JavaScript functionality (e.g., button interaction)	20%
Responsiveness	Works well on both desktop and mobile devices	15%
Submission & Documentation	Includes required files and reflection	10%
